

# Setthapong Pomrung

A recent graduate in Information and Digital Communication Technology with internship experience in developing internal web applications to digitize and optimize corporate workflows. Adept at building full-stack solutions and mobile applications to solve real-world problems and enhance operational efficiency.

## PROJECTS

### KidGuardApp (Senior Project) | 2025 - 2026

- Engineered a dual-mode mobile application (Parent & Child Modes) using Flutter and Dart, featuring secure device linking via 6-digit PIN authentication.
- Implemented Accessibility Service and Usage Stats API for real-time app monitoring and automated blocking of restricted content.
- Leveraged Firebase (Auth, Cloud Firestore) for seamless real-time data synchronization of parental control commands and configuration updates.
- Developed a Real-time GPS Tracking system using Geolocator and flutter\_map (OpenStreetMap) to monitor child location status continuously.
- Conducted end-to-end functional and performance testing on screen time limits and location alerts to ensure system stability and data security.

### Software Developer Intern (Co-operative Education) Bridgestone factory | 2025

- Spearheaded the "Internal Web Application Development" project by designing and developing 4 centralized web applications for the Production Planning and IT departments
- Built the Bladder Stock Control System and IT Stock Control System to digitize inventory workflows, enabling real-time tracking of raw materials and IT assets while significantly reducing manual data entry errors.
- Developed an IT-Disposal Web Application to systematically manage the lifecycle and documentation of retired hardware according to corporate standards.
- Created an IP Status Dashboard for real-time network monitoring across the production line, allowing the team to quickly identify connection issues and reduce system downtime.
- Managed the end-to-end System Development Life Cycle (SDLC), encompassing requirement gathering, Entity-Relationship (ER) database design, API development, UI/UX design, and User Acceptance Testing (UAT).
- Technologies Used: React.js, Tailwind CSS, Node.js, Express.js, Microsoft SQL Server.

### Pedestrian Detection System (AI Group Project) | 2024

- Developed a real-time Pedestrian Detection System utilizing state-of-the-art Computer Vision techniques to accurately identify individuals in live video feeds.
- Implemented the YOLOv8m object detection model via the Ultralytics framework to achieve high-performance, real-time person tracking.
- Leveraged Python and OpenCV for robust video stream processing, bounding box rendering, and continuous output generation.
- Tools: Python, YOLOv8m, Ultralytics, OpenCV.

### Smart Dormitory Lighting Control System (IoT Project) | 2024

- Engineered an IoT-based automated lighting system designed to optimize energy efficiency and reduce electricity waste in dormitory environments.
- Implemented 3 dynamic control modes: Scheduled timing (via RTC Module), Auto ambient light detection (via LDR sensor), and Manual override control (via Blynk Mobile App).
- Integrated microcontrollers and hardware components (NodeMCU ESP8266, Relay Modules) to establish seamless communication between physical sensors and the mobile interface.
- Tools: NodeMCU ESP8266, LDR Sensor, Relay Module, RTC Module, Blynk App.

### Social Network Mobile App | 2024

- Developed a cross-platform mobile social media application utilizing Flutter to facilitate seamless and interactive user engagement.
- Integrated Firebase Realtime Database as the core backend infrastructure to handle instant data synchronization for live user interactions and dynamic content feeds.
- Designed a responsive and intuitive mobile user interface focused on delivering a smooth, real-time social networking experience.
- Tools: Flutter, Firebase Realtime Database.

### Sports E-commerce Web App | 2024

- Developed a responsive e-commerce web application tailored for sports equipment retail, ensuring an intuitive shopping experience across multiple devices.
- Engineered a robust backend infrastructure utilizing Node.js and Express.js to securely process business logic, manage user requests, and handle dynamic product catalogs.
- Designed and implemented a relational database schema using MySQL to efficiently manage product inventory, user data, and transactional records.
- Tools: Node.js, Express.js, MySQL.

### E-commerce Website | 2023

- Full-stack Development: Designed and deployed a complete e-commerce platform handling both frontend and backend operations.
- Responsive UI: Crafted a user-friendly interface using Bootstrap to ensure a seamless shopping experience across all devices.
- Backend & Database: Utilized PHP and MySQL to efficiently process dynamic product catalogs, shopping carts, and user transactions.

## Contact

**Phone:** 098-621-7686

**Email:** setthapongc@gmail.co.th

**Address:** 18/8 , Kum Hak, Nongkhae, Saraburi 18140 , Thailand

**Github:** <https://github.com/Setthapong18>

## Skills

### Technical Skills

- Programming:** JavaScript, HTML5, CSS, Dart, SQL, PHP
- Frontend: React.js, Tailwind CSS
- Backend: Node.js, Express.js
- Mobile: Flutter
- Databases: Microsoft SQL Server, MySQL, Firebase, Supabase
- Tools: Git, GitHub, Figma, Postman, Visual Studio Code

### Languages

- Thai:** Native
- English:** Elementary

## Educational Background

### Rajamangala University of Technology Thanyaburi

Bachelor of Science (B.Sc.) in Information and Digital Technology  
Graduation: 2026 GPA : 3.16

### Nongkhae Sorakitpittaya School

Secondary Education (Science-Mathematics Program)  
Graduated: 2022 GPA : 3.58
